

Dental Instruments

AR INSTRUMED
DEUTSCHLAND GmbH

Edition-07

INTRODUCTION

AR Instrumed is located in Berlin Germany having more than 2000 different products in warehouse, stock available for quick delivery. The company has been retailing dental instruments and exporting to the quality conscious healthcare industry in all over the world. The company prides in its network of Germany-wide retailing and its global image of Quality instruments while dealing with international clients which repeatedly stand recognized by government as well as International business standards and Certifications, the company foresees a smiling future in dental industry.

This commitment to excellence has allowed us to establish our customer bases in strategic and vital surgical Hubs of the world.

AR INSTRUMED Deutschland GmbH has other international business branches in its network and many distributors worldwide.

WARRANTY POLICY

- All **AR INSTRUMED** products are warranted to be free from defects in workmanship and materials. Any product which proves defective in workmanship or materials will be repaired or replaced at no charge. Additional shipping charges for use of the AR INSTRUMED DHL/Courier return labels and shipment back to the customer will be applied as shown on your invoice.
- Warranty does not apply to normal wear and tear and use of the instrumentation beyond their limitations. It also excludes the improper usage of an instrument in a way that the particular instrument was designed and intended to be used. Moreover, instruments damaged in an abusive or accidental manner are also excluded by this warranty.
- Warranty is also voided if the instruments are not stored and sterilized properly as shown in the Instrument Care sections of the AR INSTRUMED website and catalog. Any modification, alteration or sharpening made to AR INSTRUMED instruments will render the

CLEANING

- Ultrasonic cleaning is the most effective way to clean your surgical instruments, particularly instruments with hinges, box locks and other moving parts. All instruments must be pre washed prior to being fully submerged in an open position using distilled (demineralized) water and an ultrasonic cleaning solution. Always rinse ultrasonic cleaning solution from instruments with distilled water prior to sterilization.
- An additional way to clean besides ultrasonic would be to manually clean the instruments with Nylon or stainless steel brushes using a mild or low PH surgical detergent. We recommend strongly to not use the following steel wool, steel brushes or scouring pads as these may damage the instrument finish. make sure to always rinse any cleaning solution from the instruments with distilled water prior to sterilization.
- The common caused for staining and our suggestions on how to avoid staining of the instruments are as follows: Staining is a surface deposit on instruments, and most often mistaken for rust. After autoclaving, you may notice a stain on your instruments. Rusting instruments are very rare. Stains on instruments appear in many colors and, in most cases, the colors tell you about the origin of the stain.
- Orange/brown stain: The problem is most often a phosphate layer (brown to light orange) on the instrument, which develops as a result of any of the following causes: water sources, detergents used to wash and clean instruments, surgical wrappings, cold sterilization solutions, or dried blood. Black stain: Black stains are commonly due to an acid reaction.
- Black stains may result from detergents used to clean the instrument; similar to brown stains caused by high PH in detergents. The black acid type stain can be caused by low PH (less than six) during autoclaving.
- Dark brown stain: Dark brown stains are usually a result of dried blood left on an instrument. Blood should be removed from the surface of the instrument immediately. It will break down the instruments surface with

ASTM STANDARD

- AR INSTRUMED applies international standards during its manufacturing. Following is a list and reference of those standards for our customers.
- Acquiring quality stainless steel as per ASTM standard F899-95 & ISO 713501.
- Corrosion of Surgical Instruments in conformity to ASTM standard F1089-02
- Passivation in Conformity to ASTM standard B967-05.
- Electropolishing as per ASTM standard B 912-02.
- Rockwell Hardness test in accordance with ASTM standard E18-00
- Cleaning and Descaling of stainless steel parts as per ASTM standard A380-99 (R05)
- To Select the proper grade from AISI 410, 420 AND AISI 304 Ac, several process are undertaken according to the guidelines of ASTM standard

Material Used in Different products

- Scissors - AISI 420 Japanese Stainless Steel.
- Gracey Curette - AISI 420 French Stainless Steel.
- Scalers - AISI 420 French Stainless Steel.
- Bone Rongeurs - AISI 420 French Stainless Steel.
- Root Elevator - TIPS AISI 420 French Stainless Steel & Handle AISI 304 Japanese Stainless Steel..
- Chisel & Bone Scrapers - AISI 420 French Stainless Steel.
- Extracting Forceps - AISI 410 Japanese Stainless Steel.
- Forceps - AISI 410 Japanese Stainless Steel.
- Tweezers - AISI 410 Japanese Stainless Steel.
- Retractors - AISI 410 Japanese Stainless Steel.
- Needle Holder - AISI 410 Japanese Stainless Steel.
- Orthodontics Pliers - AISI 420 Japanese Stainless Steel.
- Rubberdam Instruments - AISI 410 Japanese Stainless Steel.
- Mirror Handle - AISI 304 Japanese Stainless Steel.
- Osteotomes - AISI 304 Japanese Stainless Steel.
- Impression Tray - AISI 304 Japanese Stainless Steel.

MANUFACTURING PROCESS

- Skilled technicians are manufacturing the shapes of each tip.
- Cutting and shaping each tip using CNC machinery.
- Proper bending of each tip, from 1 to 6 times, to insure proper use qualities.
- Increasing the strength of the instruments with the use of heat treating processes.
- AR INSTRUMED raises the level of heat treating to a 50-55 hardness rating, which increases the strength of the material and minimizes wear.
- Assembling the instruments properly is of the utmost importance. If the tip is not inserted into the handle properly, it will not work correctly and may break or fall out of the handle. Each instruments' tips are inserted by highly trained and skilled technicians.
- As a final step to the process, we clean all of the instruments and do what we call a final "blading", or sharpening, to ensure the proper working edges are on each and every instrument to meet the specifications of dental professionals.

Handle Manufacturing Process

- Proper Cutting: To cut each handle of different sizes with precision machinery.
- Complete handle making process: To cut the tip to fit into each handle size.
- This process requires very precise work since there is a great possibility of product loss.
- Grooving work: To groove the handles so that it gives dentists comfort in treatment.
- (Grooving work is different depending on the functions and kinds of handles)
- Upscale Satin Handles: By applying friction on the handles in the sand barrel for a long time, the handles turn into bright satin finish.
- Ultrasonic Cleaning: Handles could get rusty without the ultrasonic cleaning process.
- Without ultrasonic cleaning, it will shorten the life-span of the instrument

Operating Manual (Instruction for Use)

Device: Stainless Steel Dental Instruments

Description & Use

We ask you to read the following instructions carefully before using the instruments. Every AR INSTRUMED instrument has been produced with great care and professionalism and its use has been specially addressed to qualified specialists.

The instruments are delivered 'non-sterilized', so they should be washed, rinsed and sterilized thoroughly before use. Many of the multi-part instruments, such as Scissors, show oil residues from the production. Please make sure that the instruments are cleaned properly.

Warnings

Never:

- Misuse instruments or overstrain joints or racks or connections of the instrument parts
- Use abrasives on instruments, as this will spoil the surface finish. This may later cause discoloration, rusting or pitting.
- Handle instruments by their tips. These should be cleaned by trained personnel only who will ensure the delicate working ends are adequately protected during storage or sterilization.
- Use general-purpose oils for instruments; only water-soluble lubricants should be used.
- Leave instruments soaking longer than necessary in chemical sterilizing solutions. After they have been sterilized, they should be washed thoroughly in warm water to remove all traces of the chemicals to prevent discoloration or pitting.
- Store damp instruments. They must be thoroughly dried first.

Instructions / Precautions / Maintenance

Always:

- Lubricate after cleaning with a proprietary water-soluble instrument lubricant.
- Follow approved cleaning procedure of hospital or clinic.
- Do not use corrosive cleaning agents. We recommend cleaning solutions and rinses with pH 7.0.
- Do not use abrasive cleaners & brushes with hard bristles (not made of metal).
- Immediately after using the instruments, they must be removed from all remains (e.g. tissue, blood, cement) using solutions whose effectiveness has been proven for disinfection in order to avoid mechanical damage.
- Use distilled water for rinsing only. Water with chloride contents may damage or even destroy the instruments.
- Do not leave instruments in cleaning or disinfecting solutions for long terms (over night or weekend), the instruments can be destroyed.
- Ensure all instruments are only used for the purpose for which they were designed.
- Handle all instruments gently. Never overstrain, drop or misuse them.
- Check all instruments for damage after use.
- Give special attention to microsurgical instruments. Their fine tips can easily be damaged by contact with other instruments or the sides of the case in which they should be kept. Hand cleaning is preferable.
- Ensure all instruments are thoroughly dried before being stored.
- Pack instruments carefully with the heavier ones lying on a piece of cloth or towel at the bottom.
- Store and sterilize bow-handled instruments on a special holder. Always leave racks and ratchets open.
- Check the hardness of the water used in the autoclave. Too hard water will leave a deposit on the instruments.
- If a water softener is used ensure it is at the manufacturer's recommended level. Too much may cause discoloration or pitting.

Sterilization

The main goal of steam sterilization is to ensure correct sterilization of the instruments without restricting them structurally or functionally. This process must only be carried out by specialist personnel who have been properly trained for this purpose. The guidelines according to DIN EN 285 and DIN EN 554 should be observed.

Autoclave sterilization by saturated steam is the most frequently used method today; it is based on the heat necessary for sterilization with saturated steam, which acts on the temperature of the instruments with heat exchange, and the pressure that the water leads to increased latent heat of vaporization.

With this method of sterilization it is strongly recommended not to exceed the sterilization temperature of 137 ° C and to use cycles that do not exceed 7 minutes with a temperature of 134 ° C and a pressure of 2.1 bar.

- Each instrument must be secured in a sterile packaging with welding seams before sterilization. Fill the autoclave with packaged materials, as far as the water vapor can penetrate freely.
- After the material has been sterilized, remove the process parameters and check the indicator strip. Then release or give again for reprocessing.
- For the packaged instruments, it is very important to carefully complete the sterilization process, because if some water remains in the casing, there is corrosion, oxidation or even a build-up of bacteria in the instruments and packaging.

2. Dry heat sterilization

Sterilization that exceeds 177 ° C (350F) weakens the hardness or character of the instrument and thus the cutting performance and elasticity (especially the cutting instruments that lose sharpness); darkening of the instruments can also occur, brown spots which look like oxidation. Therefore the instruments can be sterilized at 170 ° C for at least 60 min. or sterilized at 160 ° C for at least 120 minutes.

Aluminum and titanium: don't put aluminum instruments and titanium instruments in heating systems and / or ultrasonic baths. For cleaning these instruments please use only substances that are specifically suggested for aluminum and titanium.

Store

Store the instruments in a dry place

Pack instruments carefully with other heavier instruments. Always remember - heavy instruments at the bottom and light instruments at the top.

- Sterile, packaged instruments should be stored so that they are protected from dust, moisture, insects and vermin and extreme temperatures.

Pay special attention to microsurgical instruments. Their fine tips can easily be damaged by heavy weight and contact with other instruments and housings in which they are to be kept.

Calibration The products do not require calibration.

Disposal No special decomposition or disposal required for Surgical Instruments as they don't contain any toxic or hazardous material; the material stainless steel is recyclable in ordinary steel manufacturing units.

Return In case of damage or faulty, please return to supplier with same packaging and event description.

Expected Patient Age Group Product is for all age groups

Contradictions There are no contradictions with the instruments

AR INTRUMED NOT RESPONSIBLE FOR THE FOLLOWING CASES:

1. Damages caused by a not proper use of the instrument;
2. Damages caused by a wrong process of cleaning and/or sterilization of the instruments;
3. Damages caused by the warehousing of the instruments in unsuitable locals;
4. Damages caused by the lack of maintaining of the instruments, especially for the joint ones, that need a regular lubrication in the joint parts.

For further information or needs, we remain at your complete disposal. Kindly address your request to our email.

Black Scorpion and extraction forceps for removal of the fragments, after resection and residues of the teeth eighth the inferior included especially if mesioverso this may also be used for the Upper jaw in the case of difficult access to the Roots.

The particular shape of the forcep to avoid interference with the adjacent teeth, and prevents so to leverage accidentally on the seventh & on the sixth of arch concerned.

Made of high quality steel AISI 420, the instrument becomes characteristics of corrosion and coated with a special surface treatment, the ergonomic and lightweight slender beaks me but from the power decided will give the professional a strong feeling of use pliers solid, powerful yet precise and safe. Therefore it will be considerable and determined also the reduction of time d intervention and consequently the stress of the patient and the operator's

Extraction-Extraktion-Extracción-Extraction-Ekstrakcja

Extraction-Extraktion-Extracción-Extraction-Ekstrakcja

The Anesthesia Intraligamentary allows to inject the anesthetic directly into the ligament of the tooth so that ensure the rapid and total anesthesia only the affected tooth without having to anesthetize instead more generically an area as happens with normal anesthesia

Intraligamentary Syringe

100-329-1
 Syringe
 Stainless Steel
 1.8ml
 EU Needle
 Blue Plasma

Product Features

Tip angle of 45 ° in order to make more convenient the opertivita.

Insert anesthetic with finest

Handle with lever dosage convenient to work in both the top and the bottom of the oral cavity

Processing much less traumatic than to classical anesthesia.

Less quantities of anesthetic given for each dose 0.06 ml for single push

Advantages

Quick effect of anesthetic

Eliminated the risk hematoma formation

Plus possibility of processing of teeth located in different position.

Effect of anesthetic circumscribed even just at a single element to be treated.
 Easy to operate.

The new line of tips Micro Elevators of AR INSTRUMED Easily to Operate Because the Insertion of the Lever in Intraligamentary will Facilitated Thanks to Ergonomics and Accuracy in all Essential Shape.
 All this has been Studied in Order to ensure less Traumatic During the Extraction and Consequently Faster Post-Operative Recoveries.
 The Tips of the Instruments are Treated with a Special Coating of Titanium Allowing the use even for Implant.

High ergonomic design for easy use, thanks to the handle spread apart and bend designed structure. High hardening production for the serrated and the blade with wire tungsten carbide. The practicality combined with the strength of the instrument allows you to work on particularly hard tissues.

Bone Expander
Kit
Regular

Dental Implant Bone Expander Sinus Lift Kit, a Best Alternative To Osteotomes For The Expansion And Condensing Of The Atrophic Mandible And Maxilla.

The Kit Includes:

- 5 x Bone Expansion Screws (2.6mm, 3.0mm, 3.4mm, 4.3mm)
- 1 x Ratchet Extender
- 1 x 4.0mm Motor Mount Adapter
- 1 x 1.8mm Pilot Drill
- 2 x Parallel Pins
- 1 x Ratchet Wrench, 4.0mm Square Driver
- 1 x Sterilization Cassette / Box

108-002
Bone Expander
Kit

Dental Implant Bone Expander Sinus Lift Kit, a Best Alternative To Osteotomes For The Expansion And Condensing Of The Atrophic Mandible And Maxilla.

The Kit Includes:

- 5 x Bone Expansion Screws (2.6mm, 3.0mm, 3.4mm, 3.8mm, 4.3mm)
- 1 x Ratchet Extender 4.0mm
- 1 x 4.0mm Motor Mount Adapter (for Handpiece)
- 1 x Hand Driver / Wrench
- 1 x 1.6mm Pilot Drill
- 2 x Saw Disks (7.0 mm & 10.0mm)
- 1 x Sterilization Cassette / Box

Bone Compression Kit

108-003
Bone
Compression
Kit

The Bone Compression Kit enhances Primary Stability in Type 3 or 4 bone by gently condensing the the bone prior to implant placement.

The unique design of the compression screws also facilitates simple and effective closed sinus augmentation procedures.

108-004
Bone
Compression
Kit

Special Advantages:
Prevents traumatic Osteotomy
Increase bone density
Increases Primary Stability

Mini Multi Hex Drivers Kit

108-011

Mini Multi Hex
 Drivers Kit

A Unique designed Mini Hex drivers Kit, includes the widely used Hex Drivers during an implant Surgery with a Ratchet Extender & an Infinite Torque Ratchet Wrench.

The kit Includes:

- Ratchet Hex Drivers 1.25mm Long & Short
- Ratchet Hex Drivers 2.42mm Long & Short
- Ratchet Extender 4.0mm
- Hand Hex Driver 1.25mm long
- Infinite Torque Ratchet Wrench 4.0mm Square Driver
- Smart Sterilization / Organizer Kit

Internal Irrigation Drills Kit

108-012

Internal Irrigation
 Drill Kit

The use of internal irrigation drilling systems is promoted on the basis of improved Deliver of coolant to the bone/drill interface, which should subsequently improve local debridement and cooling, and therefore reduce thermal insult to the bone thus limiting frictional heat and reducing risk of osteonecrotic change caused due to overheating.

The Kit Includes:

8pcs Internal Irrigation Drills

- | | |
|------------------------|------------------------|
| -Dia: 2.0mm, L: 18.5mm | -Dia: 3.6mm, L: 18.5mm |

Trepine Drills Kit

108-013

Trepine Drills Kit

The trephines are used to make osseous takings with the aim of an autogenous transplant. The sharpened blades are to increase the cutting efficiency to realize a non traumatic treatment. The depth make it easier to control the Drilling Depths efficiently.

8pcs Trephines Dimensions

Internal ø	2.0mm	3.0mm	4.0mm	5.0mm	6.0mm	7.0mm	8.0mm	9.0mm
External ø	3.0mm	4.0mm	5.0mm	6.0mm	7.0mm	8.0mm	9.0mm	10.0mm

Implant Tissue Punch Kit

108-014

Implant Tissue Punch Kit

A Tissue punch is a simple and easy way to gain access to the underlying bone. It generally is chosen in Dental practice when there is:

- 1: Excellent ridge width and there will be no bone needed i.e. mandibular posterior,
- (2) Excellent keratinized gingiva,
- (3) Good access to place the punch.

6pcs Latch Type Tissue Punch

 - 2.8mm / 4.5mm - S3
 - 2.8mm / 4.5mm - S5
 - 2.8mm / 4.5mm - S7

The tri-spade drill design, which features three cutting edges, is much more stable in the hands of the clinician. It reduces crestal chatter upon entry into the bone sit (a stable drilling situation) resulting in a more perfectly prepared final hole for placement of the dental implant.
